

Programmer wanted

Do you want a flexible, versatile and evolving working day, where your knowledge and competencies within robots and machine systems are challenged?

We are a cohesive machine building department in the SAXE Group. We are constantly expanding with new business areas and can thus offer good opportunities for professional and personal development.

At the moment, we need a programmer with a background as an industrial electrician, automation technician, automation technologist, engineer, etc., who wants a varied working day with close contact to both customers, colleagues and suppliers.

ABOUT THE JOB

Our products are predominantly PUR systems (polyurethane systems) for the furniture, white goods and construction industry, as well as robot cells for plastics processing companies. Our plants are manufactured from scratch in our department. We sell plants all over the world, but mainly concentrated in Europe.

The plants we deliver are complex but smaller plants and we work with the SIEMENS TIA platform, and Allen-Bradley PLC. Therefore, it is a prerequisite that you have knowledge of these platforms and are robust in C #.

You have a great interest in the development, design and maintenance of automation and production solutions and have several years of practical experience in electrical constructions of machines. Knowledge of the Machinery Directive and standards within machine safety is desirable.

As a programmer, you must be responsible for software and commissioning of facilities, including programming of e.g. robots, PLC, Servo, HMI, in collaboration with our mechanical and electrical design department and technical managers.

You are structured in your work, interested in development and have some years of experience in programming automation equipment. You will be responsible for the programming of systems and participate in commissioning, testing and installation.

In connection with the design and delivery of the projects, there will be some travel abroad. You must thus master Danish and English in writing and speaking and have a good general IT understanding. We expect you to be flexible in terms of working hours.

The work will primarily take place in our machine building department in Laurbjerg, near Randers and our department in Hvidovre

PERSONAL CHARACTERISTICS

You have an eye for detail and are able to create an overview of the tasks that ensure that our system is run in and handed over with customer satisfaction. You work in a structured, independent manner and can handle sometimes stressful situations. We emphasize that you deliver the items in proper condition.

WE OFFER

You get responsibilities and challenges in a department where everyone enjoys the informal environment with high ceilings and room for good humor. For the right person, there will be ample opportunity for both professional and personal development. Of course you get flexible working hours by appointment. Salary is negotiated according to qualifications.
